## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 7-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brenner et al (XP-002058725) in view of Eguchi et al (Japanese Journal of Applied Physics) and further in view of Vollenbroek et al (USP 4,704,347).

The rejection is repeated herein as the previous Office action mailed 7/31/01 (see paragraph 3).

## Response to Arguments

1. Applicant's arguments filed 1/18/02 have been fully considered but they are not persuasive. Applicant argues that Brenner does not teach or suggest a fabrication of active and passive polymer-based component for use in integrated optics using organometallic compounds nor does it describe filling the unexposed regions of at least one patternable resist layer with organometallic compounds where the optoelectronic component is capable of being selectively changed as a function of temperature and application time as in claim 7. Applicant also argues that Eguchi does not cure the deficiencies of the Brenner reference. This is not persuasive because Brenner teaches a fabrication process for an optoelectroic device, wherein a polymer material is exposed

Application/Control Number: 09/462,283

Art Unit: 1746

by an etching mask and then the unexposed region are filled with monomer (see the fabrication process at page 161 and figure 2.1). Examiner agrees that Brenner does not teach the monomer is organometallic compound. However, Eguchi et al teach that organometallic compound is used as monomer for low optical losses at the connection of an optical component (see the rejection). Examiner states that the optoelectronic component includes exposed and unexposed region. So, the component includes active and passive regions. Examiner also states that applicant's argument is more specific than the claims because the active and passive polymer-based component is not claimed, which is preamble of the claim and that has given less patentable weight. Examiner further indicates that the modified Brenner's optical component with Eguchi and Vollenbroek would be capable of being selectively changed as a function of temperature and time because the monomeric organometallic compound would change the physical properties during a change of temperature and application time. It is noted that the phrase "capable of" does not recite a positive limitation of a claim.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shamim Ahmed whose telephone number is (703) 305-1929. The examiner can normally be reached on M-Thu (7:00-5:30) Every Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Randy Gulakowski can be reached on (703) 308-4333. The fax phone numbers for the organization where this application or proceeding is assigned are (703)-305-7718 for regular communications and (703) 872-9311 for After Final communications.

Application/Control Number: 09/462,283

Art Unit: 1746

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
